

Animated Song Project.

1. Stage

The stage will have 10 different Backdrops 1 or 2 songs. The developer (YOU) must create the stages (As discuss in class) we do this by using the 'Paint New backdrop'. You must upload the song or songs to scratch. For those that do not know I to do this I will email the instructions.

2. Sprite 1

You as the developer can create or use any sprite but we want this sprite to either dance or play a musical instrument. This sprite must have 8 different 'Costumes' we can add and modify customers by copying the main customer and them modifying it.

3. Sprite 2

You as the developer can create or use any sprite but we want this sprite to either dance or play a musical instrument. This sprite must have 8 different 'Costumes' we can add and modify customers by copying the main customer and them modifying it.

Within this project as the developer you are to use your imagination ☺ This project can be view online at <https://scratch.mit.edu/projects/95464554/>

Remember it's all about creativity and HAVING FUN ☺
